Experience

WhatsApp / Meta — New York, NY
Senior Data Scientist - WhatsApp Growth Team — *Feb 2024 - current*

- **Growth Strategy & Tradeoffs**: Drove analytical direction and cross-team alignment on WhatsApp's growth/integrity tradeoff for a $400M+ registration budget; delivered 6% of the company growth goal at ∼1/100 the cost of other levers, outperforming higher-budget pillars and enabling WhatsApp's first YoY budget reduction.
- **Cross-App Account Linking**: Led analytics for WhatsApp account linking with Facebook and Instagram across 5+ product and engineering teams, shipping 10 major cross-app features and scaling adoption to 300M+ linked accounts within 6 months (53% over target).
- **Identity Model Design**: Designed WhatsApp's new identity model, now the canonical way the company accounts for registering users across Growth and Integrity; preserves privacy while maintaining consistency for returning registrations.
- **Experimentation at Scale**: Scaled the Growth team's experiment review process to 30+ engineers and 80+ reviews by building AI-augmented templates with pre-pulled metrics and automated regression breakdowns; ran cross-functional trainings extending standards to other DS and to AI analytics agents.

Strivr — New York, NY
Senior Research Scientist / AI Developer — *Nov 2022 - Jan 2024*

- **AI Product Development**: Primary AI owner; built a context-aware LLM system accelerating content creation by 30%+, co-designed a multi-dimensional LLM evaluation rubric, and led the AI strategy roadmap.
- **Zero-to-One Execution**: Owned full product development cycles end-to-end including engineering deployments; built AI product demos used in investor presentations and drove enterprise security reviews.

Lyft — New York, NY
Senior Data Scientist - Rideshare / Delivery Team — *Mar 2022 - Nov 2022*
Data Scientist - Customer Platform Science / Integrity Team — *Oct 2018 - Mar 2022*

- **ML & Experimentation**: Built an ML-based fraud classifier with active-learning sampling; designed and ran rollout experiments and policy tests, reducing steady-state failed-charge losses by 62% and delivering $24M+ in combined annual savings.
- **Metric Design & Dashboards**: Defined core integrity and payments metrics and built self-serve dashboards used to prioritize work across Integrity, Identity, and Payments; one data source ranked in the top 7% of company-wide dashboard usage.
- **Pricing & Unit Economics**: Modeled price elasticity for large delivery clients and designed volume-based rate structures, driving 8% growth in delivery volume while improving per-unit economics.
- **Team Leadership**: Managed two contract analytics ICs, owning their work plans, review, and ramp.

The Brattle Group — San Francisco, CA
Research Analyst — *Jul 2016 - Sep 2018*

- **Econometric & Causal Modeling**: Built causal and econometric models to quantify economic damages across healthcare, pharma, transportation, and finance matters; analyses used by expert witnesses in regulatory proceedings.

Education

University of Pennsylvania — Philadelphia, PA
Bachelor of Arts in Mathematical Economics — Minors in Computer Science and Statistics — *Aug 2012 – May 2016*

Projects

Ask Data - 2023: Built a tool to query data in natural language with SQL and Python outputs.
Unstructured - 2023: Implemented table and XML parsing in DOCX and Google Docs formats for an open-source document preprocessing library for LLM workflows.
ML Course - 2018: Authored Jupyter course modules on NLP, data visualization, Naive Bayes, and regression.
R Package - 2017: Authored and published an R package adopted internally by ∼12 colleagues for analytical workflows.

Skills

Languages & Tools: Python, SQL (Presto, PostgreSQL), R, Git, Excel, Claude Code
Core Strengths: Experimentation and causal inference, metric design, growth strategy, ML modeling, product problem framing, forecasting, self-serve dashboarding
